I've noticed that when you try to save a cube of your view in qview it saves the data very well. However, the label information, particularly lat/lons, are not recorded. For instance, if I have a global Moon image open and want to save the data I'm view of Copernicus I'm looking at I can do the following:		
File>Save As> then 'Export Full Res'		
The resulting cube is of what I'm viewing, but the lat/lons are still +/-90/ and +/-180 respectively. The main draw back is I can't use that cube as a maptemplate for other data sets. Is this a bug in the Mac version of ISIS? Huh		
Thanks,

### History

#### #1 - 2012-10-01 04:18 PM - Steven Lambright

I haven't started work on this ticket... this looks like Isis support. Should we move it back to acknowledged for it to be re-prioritized under the new system?

#### #2 - 2012-10-01 06:34 PM - Tammy Becker

Unassigned from Steven; back to acknowledge to be que-ed and reassigned appropriately under a future FY-Quarter isis-support team.

#### #3 - 2013-02-26 11:11 AM - Steven Lambright

This appears to already be fixed.
